1.1 How to update the V@Home software

Check your current V@Home version

1. Access your V@Home setup page by pressing the settings icon in your VBox@TV mobile app or by right clicking the “VBox TV Gateway” icon found in your “Network” and selecting the “view device web page”

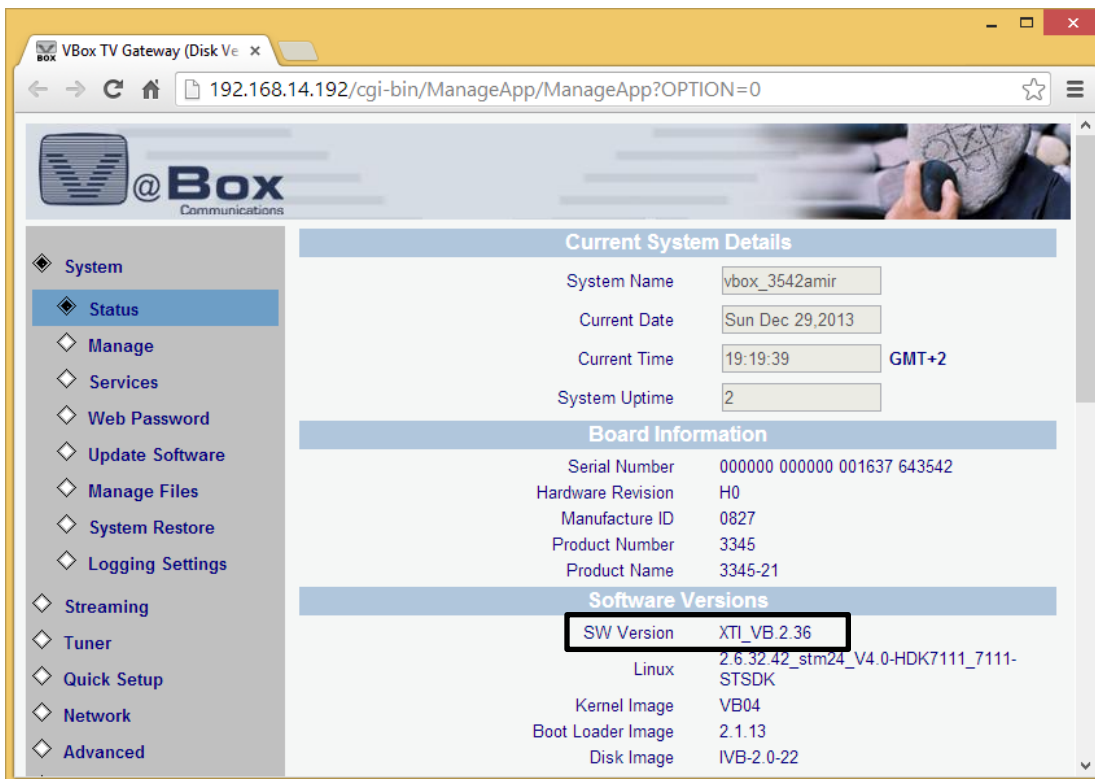

PC Network devices window

VBox V@Home XTi - TV Gateway Software Update

2. VBox TV Gateway setting page

3. Press the “Manage” button to access the setting page and look for the SW version

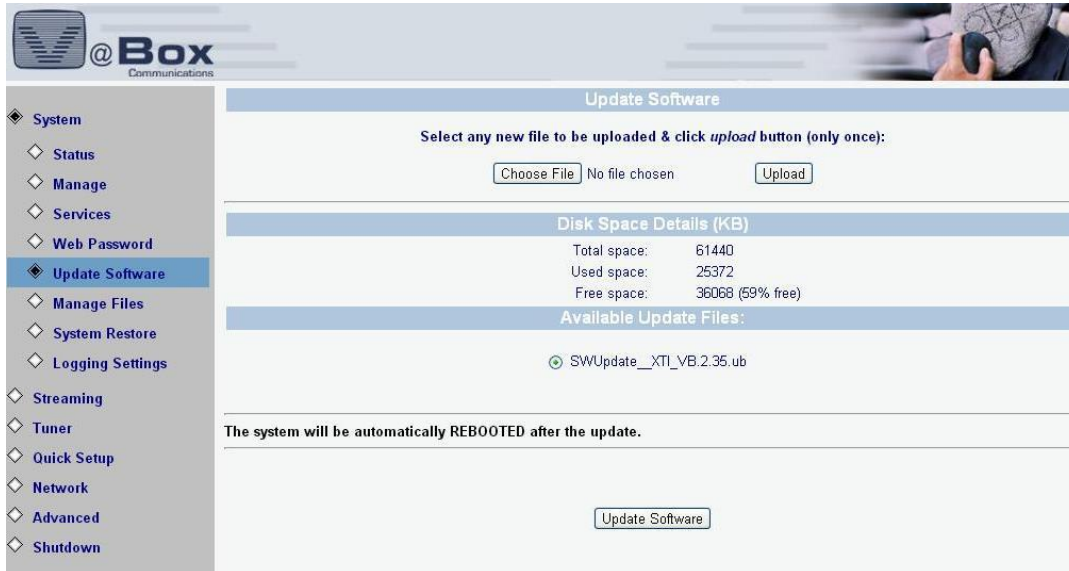

VBox V@Home XTi - TV Gateway Software Update

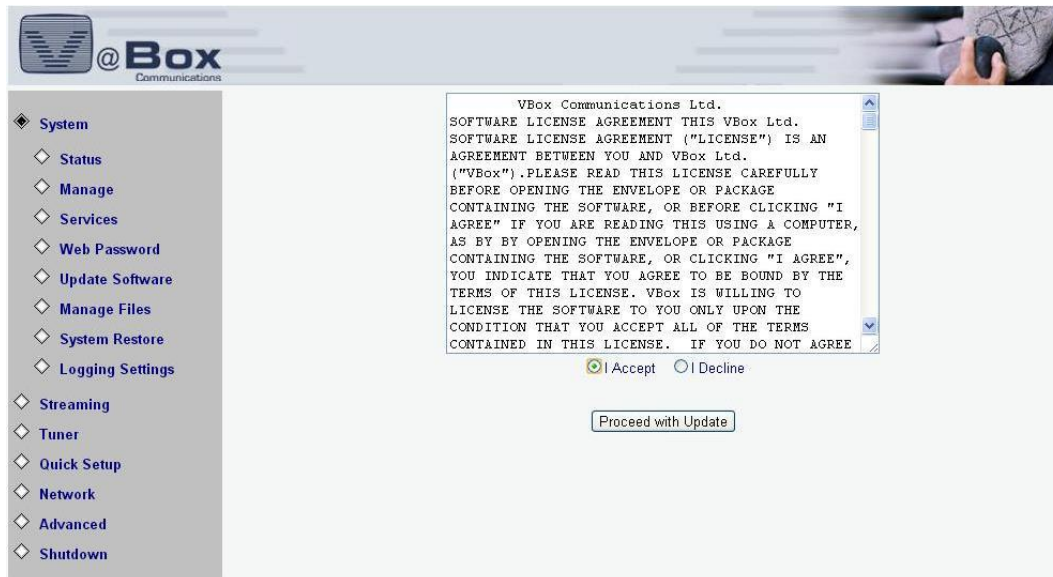

1.2 Updating the V@Home software

Download a newer version from the links below and follow the update process

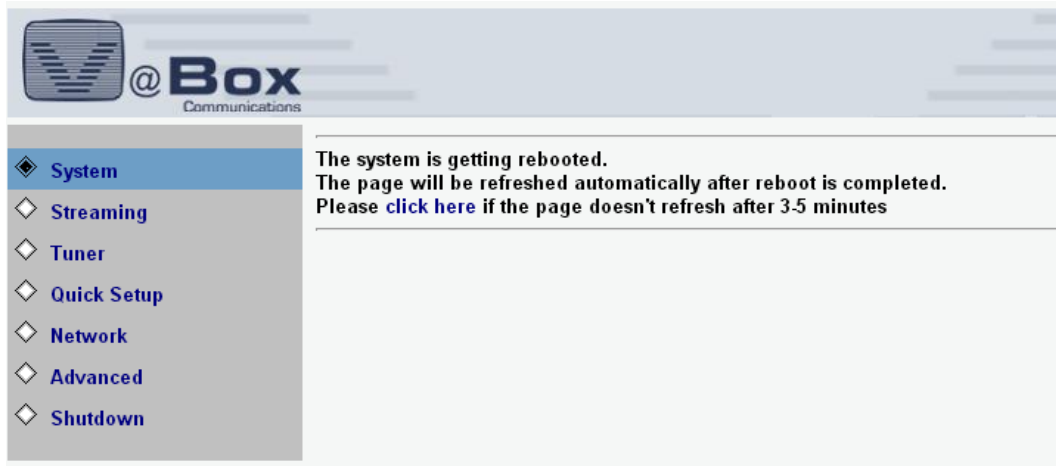

1. Download the latest Firmware version to your computer
2. Press “Update Software” on the VBox setting page and press the “Choose a file” button
3. Locate the download Firmware file and press the “Upload” button

4. Press the “Update Software” button

5. Read and accept the license agreement and press the “Proceed with Update”

6. Wait for the page to refresh
Do not turn off the V@Home or unplug the power during the software update
7. The Software update is completed when the System Status page loads and the new software version is registered in the SW version
